ABSTRACT

Based on a three-phase program review process used at Miami-Dade Community College (MDCC) in Florida, this report presents a series of tables providing job placement and enrollment data for the college's associate in science (AS) programs. The tables present the following: (1) information on enrollments, completions, and graduate placement for the 33 AS programs that met state standards for program placements; (2) the same information for the 29 programs that did not meet placement standards; (3) a list of programs with no graduates in 1984-85 and 1985-86; (4) a list of programs with fewer than 15 enrollees; (5) a list of programs flagged for below standard performance; (6) a comparison of enrollment and placement rates of MDCC programs with other community colleges; (7) statewide vocational program placement rates for community colleges compared to MDCC 1983-84 graduates; and (8) internal program review data for 1981-82 through 1985-86 by campus on program enrollees, program graduates, employment patterns, continuing education patterns, placement rates, and student majors. INTERNAL PROGRAM REVIEW OF
ASSOCIATE IN SCIENCE PROGRAMS
1981-82 THROUGH 1985-86

Historically, Miami-Dade Community College has continually monitored its occupational programs to determine needs and effectiveness. As a result, programs were added, deleted, or consolidated. The Program Review process over recent years has intensified due to expanded statewide assessment mandates. Three phases comprise program review. Level I identifies programs below the 70% standard for the placement of program graduates in jobs related to their college training; continuation of education is also calculated into this standard. Level II provides for an in-depth review of those programs initially identified. Programs falling below the 60% placement rate are automatically reviewed. This review seeks to resolve local management issues and practices through a plan of action. Level III employes program funding termination procedures. Implementation of these Florida statutes began with the 1984-85 program completions. If, beginning with this date, programs fail to meet standards within three years (1986-87), funding for these programs will cease.

Data for these tables were obtained from: 1) surveys of former students, 2) Department of Labor tapes, 3) State University System course file tapes, 4) an elaborate crosswalk between M-DCC program codes and State Standards of Industrial Classification (SIC) codes, and 5) M-DCC student data files. The option given by the State to delete Non-Resident Aliens in 1984-85 report year from the completions pool enhanced equity in reporting data populations. Data from the Survey of Applicants for Graduation, a sixth source of data, will be reflected in placement results in the 1986-87 report year.

Table 1 displays the 33 Associate in Science programs that met State standards for program placements. The number of completions shown may have been first-time-in-college enrollments three or four years earlier. The four secretarial science programs have since been subsumed under the Office Technology program. The numbers of graduates shown for continuing education is believed to be under-reported. A number of these completers

are attending private institutions of higher learning in Florida or have since enrolled in public universities out of state. This conclusion is based on extrapolations from previous research and empirical findings.

Programs not meeting State placement standards are presented in Table 2. There are 29 of these programs. Approximately half of these programs have a 0% placement rate due to nearly zero numbers of completions. A closer examination of the bottom five programs marginal to the placement criterion (64%-67%) reveals that the unknown status of graduates contributed heavily to marginality. A number of programs have fewer than six completions. In an internal report of the Division of Community Colleges on the "Analysis of 1983-84 Vocational Placement Rates," dated September 24, 1985, concern was expressed over the statistical significance with regard to program decisions made on a one-year basis for these programs. It was recommended that a trend analysis would more accurately reflect program performance. Data for trend analyses are detailed in subsequent tables in this report.

Table 3 lists A.S. programs with zero graduates for 1984-85 and 1985-86. Three programs (Commercial and Industrial Photography, Home Economics, Instrumental Technology) have no graduates across years. Occupational programs in alphabetical order across five years in this report detail indicator variables for a holistic perspective.

Table 4 shows programs with fewer than 15 enrollees in 1984-85 and 1985-86. Programs not meeting this standard over comparison years are Home Economics, Electrical Distribution Technology, Recreational Leadership, and Fire Service Administration.

Performance indicators is the topic of Table 5. The five State-imposed variables (headcount minimum 15, headcount by range, at or above index standard, completion index range and 70% placement) are flagged (X) for non-compliance to standards. The headcount range variable is specific to each program and is defined as .8 or more than 1.2 of prior two-year average. The index standard variable has been set at .33. Where headcounts exceed the upper range, the "X" flag has been converted to an "a," a

positive indicator. Exact placement percentages for each program follow later in the report. A quick comparison across years by program can be seen for the 70% placement standard.

Programs below the 70% placement criterion at Miami-Dade Community College are compared with corresponding programs among the 27 other community colleges in Florida in Table 6. A blank (-) represents no comparable program. The digits show percentage below criterion. Symbols are keyed at the bottom of the page. Only programs with comparable titles and CIP codes are included in this table. Three programs (Home Economics, Postal Management, Real Estate) across colleges are uniformly low in producing completors.

Table 7 presents the mean statewide program area placement rates for community colleges compared to Miami-Dade Community College placement rates by programs for 1983-84 graduates. Generally, those program areas statewide having low mean placement rates corresponded to M-DCC programs with low placement rates. In some of these program areas (Aviation Tech./Administration, Court Reporting, Electroencephalographic Tech., Fashion Design, Vision Care Tech. Opr.), M-DCC's rates were largely contributory to the state mean. M-DCC's Hospitality Management, Office Technology, Radiologic Technology, and Business Data Processing programs far exceeded the state mean in 1983-84. Programs that were far below the state placement mean are Marketing and Real Estate. Programs at M-DCC that were not obviously associated with state program areas were omitted from this table.

Tables 8 - 65 contain, in alphabetical order by program title, data for the report years 1981-82 through 1985-86. Variables in these tables include those related to the success criterion. Included also are variables that contribute negatively to placement rates. Declaration of intent to enter a program by both A.S. and A.A. students are a form of enrollment projections. With the exception of 1982-83, all employed related and continuing education headcounts are unduplicated. In 1984-85 Non-Resident Aliens were removed from the placement pool as permitted by the State, hence the pool may be smaller than the number of program graduates. The percent placed is comprised of employed related and continuing

education, the only two factors defined as success. The 1985-86 placement data will be collected this Winter Term, thence the blanks for that year. Many programs are single campus programs and collegewide data reflect that singularity.

Ratios of program graduates to program enrollees are a highly inappropriate method of measuring program success as is commonly done in comparisons with universities. Graduates of community colleges in any given year may have been enrollees as far back as twenty years. More likely, with a 65% Fall Term part-time status of students, these occupational graduates were enrollments for three to five years previous to completion. The parameters for determining success of vocational graduates by the State is detrimentally restrictive. This narrowness raises issues related to the definition of success. Are students who have met their educational goals short of a degree unsuccessful? Are those who fulfilled their intent of upgrading job skills unsuccessful? Are students whose patterns of enrollment differ from that of the traditional university student less deserving of program funding support than their traditional counterparts? Are conceptual strictures and myopia rigidly excluding other successful outcomes as criterion measures? These issues concerning the operational definition of success are particularly critical when one considers that the part-time enrollment rate is 65% and many community college students fulfill short-term objectives for attending college that enhance their career and personal needs.
